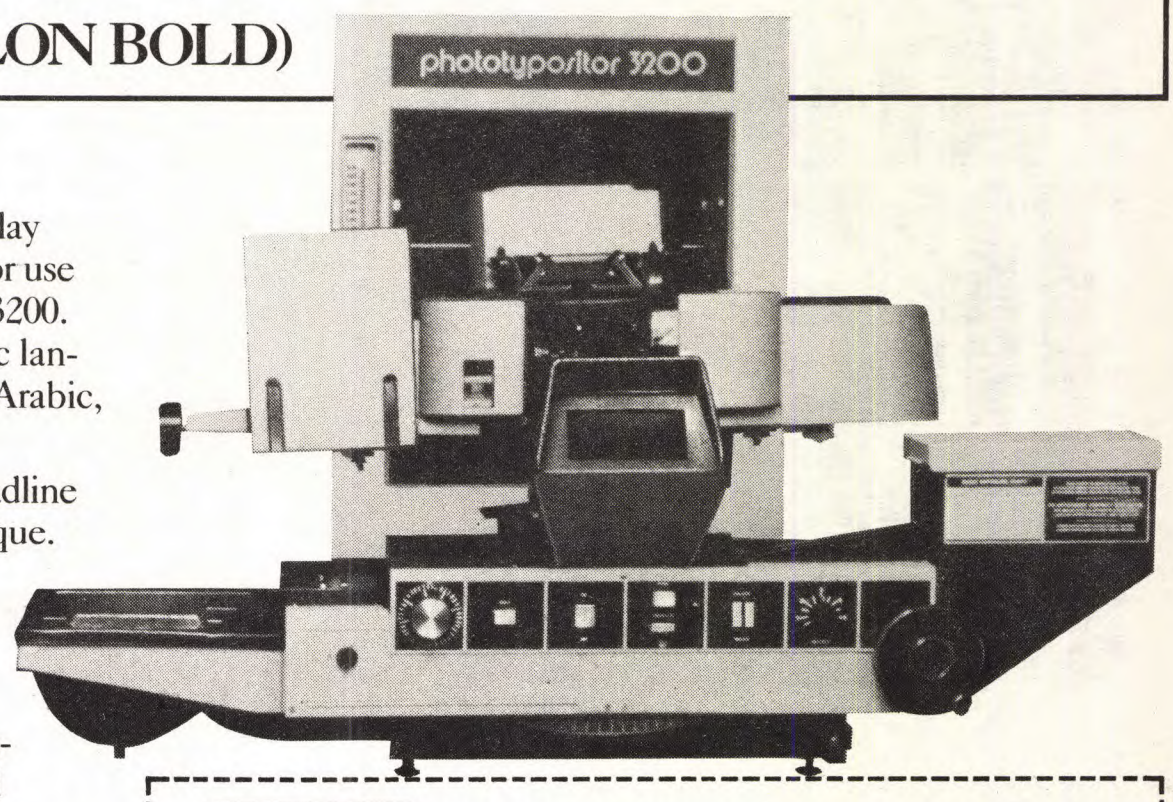
(CHEROKEE CASLON BOLD)



This is just one of 2500 display typefaces and designs available for use with the VGC Photo Typositor® 3200. Including special fonts for exotic languages such as Korean, Greek, Arabic, and Cherokee.

But the Photo Typositor headline typesetter itself is even more unique. Thanks to its ingenious design, each character you set can be enlarged to 144 pt., reduced to 18 pt., visually spaced tight or loose, italicized, backslanted, condensed, elongated, bounced, and staggered. All done quickly, easily, economically–in regular room light. And the quality of the typography is without peer.

The Photo Typositor 3200. Remarkable in any language–and a truly creative tool for the graphics professional. Call or write to find out more.
